

Our customer needed a three-sided retractable and stationary insulated curtain wall solution for their facility where the powder coating, drying and curing process is all conducted onsite. The induction heat used traveled throughout the warehouse which not only made it uncomfortable for the employees who were working, but also the energy inefficiency made the drying, curing and painting process take up to four days to complete the cycle.

By installing **AmCraft's Thermo-Block Insulated Curtain Wall Enclosure**, our customer was able to reduce the powder coating cycle to one day, conserve energy, and improve the comfort level for their employees.

**“Installing Thermo-Block  
Insulated Curtains  
Increased Productivity  
by 3 Days!”**
